- Each student spends about \$10,000.00 for each stock.
- Pick 10 different companies (from this list or choose/research your own companies)
- Divide \$10,000.00 by the current stock price.
- *See Example: below for Buying \$10,000.00 of Walt Disney. DIS is trading at \$148.09. Round the stock price to \$148.00*
- $10,000.00 \div 148 = 67.56$ (round to the nearest whole number)
- I or you can buy 68 shares of Disney stock
- Use the same formula for the other 9 stocks you want to buy
- $(10,000.00 \div \text{current stock price}) = \text{number of shares I can buy}$
